

OpenHand

plum communications ltd

OpenHand

- email on the move
- share calendars
- browse public folders
- Outlook web access
- read and edit attachments

Plum mobile service provides businesses with advice on the best choice of mobile network, tariff, mobile data and email on the move services, including OpenHand. The OpenHand wireless office solution is a client / server remote access software solution which enables mobile devices with a connection to the internet, such as mobile phones and laptops, to connect quickly to **email, contacts** and **calendars**.

What our customers say?

plum services

- broadband
- consultancy
- mobiles
- security
- telephone calls
- telephone lines
- telephone systems

OpenHand allows you to choose your own hardware

OpenHand is compatible with a variety of mobile phones and laptops, so there is no need to purchase dedicated mobile devices with limited functionality.

No long term contract

With OpenHand, you pay monthly for each user license named on the server, on a rolling contract basis. User licenses are transferable: as employees come and go, the licenses can be reused. In addition, one user licence supports all of our client applications, so OpenHand can be accessed by the user on a mobile, laptop and home PC, all for the price of one user licence. License quantity can also be adjusted.

No need to change network

Users can stay with their existing network and use either GSM or GPRS.

High speeds

OpenHand wireless email combines advanced data compression and latency reduction technology to deliver data at very high speeds. Built to run over the slowest readily available mobile networks (such as GSM), the OpenHand wireless email consistently outperforms others in terms of speed to access the information important to you, in the format you want it. OpenHand's superior speed also significantly reduces data costs.

Data is never stored on the device

With OpenHand wireless email, data is never stored on the device, unless specifically requested by the user (a feature that can also be disabled by the server administrator). This ensures that if a device is lost or stolen, data is not at risk.

OpenHand is not limited to mobile email

OpenHand is not limited to mobile email. Providing a pre-built framework, companies are already taking advantage of the rapid deployment time for mobilising corporate data from third party or bespoke solutions. Demanding businesses want reliable, flexible and secure solutions... OpenHand delivers this and more.

Worldwide access

Mobile data services are rapidly being rolled out all around the world by telecoms providers: Europe is still leading the rest of the world, but great strides are being made in the Americas, the middle and far East and Australasia - OpenHand has been used successfully in all these territories. OpenHand's network independence gives it global roaming freedom that most competitors simply cannot offer.

effective communications for business

business goal: business improvement • connectivity • cost reduction • security
